

Idea:

Meal planing / diet planing / recipe helper web application

Main features:

- Filter recipes based on the available / favorite ingredients;
- Filter recipes based on the prices (possible solutions: manual entry from the user, regional search based on the IP address, data from the local government/retailers data);
- Filter recipes based on the nutrition and / or calories;
- Filter recipes based on the additional filters (prep.time, vegetarian, kosher, halal, etc);

Additional features:

- Users can create and suggest their own recipes;
- Users can vote for the recipes and we can filter recipes by popularity;
- Add different kind of recipes, for example pastries;

Key components:

- Ingredients database;
- Recipes database;
- Web application itself;
